1 Feedback

Overall, the assignment documentation was clear and thorough. This made all of the tasks reasonable and there was not usually too much confusion about what we were being asked to implement. One area of confusion that came up in our group was how to specifically take what we implemented in part 2 and use that in the first part of part 3. In general, we were confused on how the Pipeline was working and think that it would be useful to have us work through a smaller example instead of just reading the documentation for Pipelines. Another issue that we came upon when working on part 4 of the lab was that we were getting an error within a part of the `get_test_scores(...)` that we did not write. It ended up being that we needed to downgrade our version of scikit-learn. If it could be specified at the beginning of the lab that there is a certain version of scikit-learn that is necessary to complete the lab, this would have saved time in debugging.
